How this score is built

- Every sub-metric scores 0–100 as $\text{actual} \div \text{target} \times 100$.
- Sub-metric scores combine into a category score using each row's weight.
- Category scores combine into the overall score using data/weights.json.
- Full detail, every formula, every source: docs/methodology.md in the Orbit2 project folder.

Next steps

- Replace any zeroed sub-metrics with real Q3 data via the Evidence Library or CSVs.
- Log key deals in data/deals.csv as they close so this deck stays current.
- Re-generate this deck any time from the Orbit2 dashboard's Reports page.
